

# JAGUAR

## SPECIFICITIES

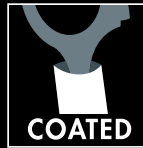

The symmetrical position of the two finger rings delivers a traditional cutting sensation.

The movable thumb ring follows the natural movement of the thumb during cutting and ensures total relaxation.

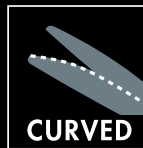

The offset position of the two scissor rings relieves tension in the muscles of the arm, neck, and shoulders. Cutting becomes comfortable and effortless.

High-quality coating prevents direct contact between the skin and the steel for protection in case of nickel allergy.

Short, downward angled thumb handle for ergonomic working posture and a relaxed feeling while cutting. The arm, neck, and shoulder muscles remain relaxed.

Guarantees the ideal cutting angle in any position, thereby delivering a precise, straight cut over the entire length of the blade.

The angled thumb ring reduces friction and pressure marks and gives secure control of the scissors. Cutting becomes even more pleasant and comfortable.

V-shaped thinning teeth lend a smooth, easy feeling when closing. Squeezing and pushing of the hair is avoided. The hair is cut easily and precisely.

Two finger rings angled in opposite directions provide optimum support for the natural hand position. This comfortable, ergonomic ring shape offers ideal security when moving the scissors.

Slightly curved thinning teeth with additionally V-teeth serration plus guide tooth on each V ensuring an ultra-fine cut appearance and a pleasantly smooth cutting feel.

The rotating insert ring moves with the thumb. Friction and pressure marks are prevented without affecting the sense for the scissors.

Classic blades with a flat cutting edge angle for excellent sharpness. Microserration on one blade avoids slippage of the hair.
